DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 16-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Keller et al. (503).

Claim 16

Keller et al. (503) discloses a multiwavelength detection chip (Fig. 1, Ref. 19) configured to be detachable (Col. 3, lines 4-7) relative to an optical unit (Fig. 1, Ref. 12) unitarily including a light supply means (Fig. 1, Ref. 10) and a light detection means (Fig. 1, Ref. 28).

FIG. 1

Claim 17

Keller et al. (503) further discloses a light path charged with a first material (Col. 2, lines 47-58); and the other portion charged with a second material having a different refractive index from the first material (Col. 3, lines 27-38).

Allowable Subject Matter

4. Claims 1-15 are allowed over the prior art of record.
5. The following is a statement of reasons for the indication of allowable subject matter:

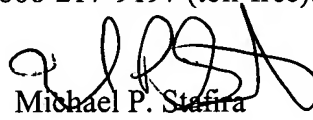

Regarding claim 1, the prior art fails to disclose or make obvious a surface plasmon sensor having a plurality of reflective surfaces provided at respective optical paths from the light supply means to the light detection means, the reflective surfaces being arranged opposing to the respective surface plasmon resonance detection surfaces; a wave formed multiwell formed with the surface plasmon resonance detection surfaces and the reflective surfaces, and in combination with the other recited limitations of claim 1. Claims 2-8 are allowed by the virtue of dependency on the allowed claim 1.

Regarding claim 9, the prior art fails to disclose or make obvious a surface plasmon resonance measurement device having a plurality of reflective surfaces provided at respective optical paths from the light supply means to the light detection means, the reflective surfaces being arranged opposing to the respective surface plasmon resonance detection; a wave formed multiwell formed with the surface plasmon resonance detection surfaces and the reflective surfaces, and in combination with the other recited limitations of claim 9. Claims 10-15 are allowed by the virtue of dependency on the allowed claim 9.
